Memory and study tips

**Do you want to learn ways to enhance your memory?
Are you wasting time trying to force yourself to study?
Are you thinking “I never do well in exams. What’s wrong with me?”**

While you are here at school your brain is going to be your best asset and one of your best friends. **How well are you looking after it?**

It actually takes a lot of energy to run your brain and while it accounts for just 2% of your body weight it uses 20% of your body’s oxygen, 20% of your blood, and 24% of your glucose.

It’s important to look after your brain to get the best results. This means: exercising, healthy well, getting adequate rest and sleep, managing your stress, limiting alcohol and caffeine and avoiding drugs.

If you are doing these and want a few extra tips on getting the best results from your brain then try the following:

1. When you are studying, try teaching the material to someone or something else (pets, siblings, a camera).
2. Create mental associations with the use of mind maps – use different colours to break into topic areas and different lines to show relationships between certain topics.
3. Draw diagrams to help you recall processes, parts of the body, machines etc.
4. Use a font that you find easy to read. Arial or Times New Roman are good ones.
5. Create flash cards in different colours to help you review the material.
6. Vary your place of study – changing environment helps you improve recall and retention.
7. Use practice exams.
8. Take regular study breaks – after 1.5 hrs without a break no new information is assimilated.
9. Study in a group.
10. Don’t stay up all night the night before an exam, sleep improves the functioning of the brain.
11. Engage in some meditation or relaxation techniques to improve concentration and reduce stress levels.

Give these tips a go and see if you can improve your results this semester
